Project Testing Phase

Script-Controlled ACL - Restrict Record Access Based on Field Value

ServiceNow Platform

Project Title	Script-Controlled ACL - Restrict Record Access Based on Field Value
Platform	ServiceNow (Table, Roles, ACL)
Team Size	5 Members
Lab Duration	3 hrs
Phase	6. Project Testing Phase

1. Testing Objective

To verify that the READ, CREATE, WRITE and DELETE ACLs enforce record-level security correctly for different users. Testing is done by **impersonating** each user and opening the list using **u_institution_details.list** in the All menu.

2. Test Approach

- Functional testing of each ACL operation.
- Positive tests (authorised user) and negative tests (unauthorised user).
- Role-combination testing to confirm the cumulative permissions.
- Screenshots captured as evidence for each case.

3. Test Data

Roll Number	Branch
STU100	ECE
STU200	EEE
STU300	CSE

4. Test Cases

ID	Scenario	User / Roles	Status
TC-01	Open list as bb1 user	EEE User (bb1)	Pass / Fail
TC-02	Open list as user without role	User with no bb roles	Pass / Fail
TC-03	Open list as admin	System Administrator	Pass / Fail
TC-04	Check New button with bb1 + bb2	EEE User	Pass / Fail

TC-05	Edit Description with bb1 + bb2 + bb3	EEE User	Pass / Fail
TC-06	Edit without bb3	User with bb1 + bb2 only	Pass / Fail
TC-07	Delete with bb1 to bb4	EEE User	Pass / Fail
TC-08	Delete without bb4	User with bb1 to bb3	Pass / Fail

5. Test Procedure (Example - TC-01)

- Impersonate the EEE User from the profile menu.
- Type **u_institution_details.list** in the All menu and press Enter.
- Confirm only records with Branch = EEE are displayed.
- Impersonate Admin and repeat to confirm all records are visible.

6. Test Result Summary

Total Test Cases	Passed	Failed	Pending
8	—	—	—

7. Defect Log

Defect ID	Description	Severity	Status	Fix
-	(Record any issue found during testing)	-	-	-

8. Common Issues and Fixes

- **User sees no records:** check that bb1 is assigned and the ACL is active.
- **ACL cannot be created:** elevate security_admin first.
- **New button missing:** confirm bb2 is assigned and CREATE ACL is active.
- **Cannot edit:** confirm bb3 is assigned and WRITE ACL exists on the table.
- **Changes not visible:** log out or re-impersonate the user.

9. Conclusion

Once all test cases pass, the ACL implementation meets the acceptance criteria defined in the Requirement Analysis phase.
